Hi there,

I’m Mihai Tocitu, a Montreal-based designer applying for the Product Designer role, and I’d love to be part of the team that helps shape your products.

I design AI-native tools for enterprises, for pricing analysts, supply chain and inventory planners, document drafters and asset managers: people with lots of decisions to make and very little time. I’m a huge advocate of AI transparency and UI explainability, so the same people can confidently say “that makes perfect sense” before clicking submit.

As such, I’ve seen analysts move from a conservative default to price exploration and bolder calls, technicians addressing alarms before they even triggered, documents drafted and validated in half the time, and people clicking logout earlier to go be with their loved ones.

I’m very hands-on, end to end. I use Claude for research, planning, scoping, documenting, fast prototyping, demos and user sessions, and Figma for high-fidelity design. Data scientists, PMs and engineers always get something real to react to early, so we can push back on the right things.

Outside work, I’m a dad to two humans and three cats, and I grow berries in my backyard with mixed results (OKRs pending).

I’d love to talk. My work lives at https://mihaitocitu.ca

Warmly,
Mihai Tocitu
