Bonjour, hi, i'm

Mihai Tocitu

Product Designer specializing in AI-native enterprise experiences - from demand forecasting and pricing optimization to supply chain and document drafting - across Canada's and the world's largest organizations

Maven Maven AI-Powered UX Design certification | Google UX Pro certification / EN FR RO

AI Product Designer / IVADO Labs / Apr 2024 -

Design AI-native enterprise experiences that help people act on complex data with clarity, trust, and control.

- Build enterprise products, from decision tools to conversational AI, for some of the largest organizations in Canada and globally, translating complex model outputs into interfaces people can trust and act on
- Use Claude daily across research, prototyping, and design-system work - build coded, interactive prototypes shipped to GitHub, and custom skills adopted by the design team to speed up delivery
- Run workshops and refine high-fidelity prototypes in Figma/Claude, working directly with data scientists, PMs, and engineers to align on direction and constraints
- Champion visual harmony - alignment, spacing, hierarchy - as a foundation for AI transparency and explainability, designing for user trust without sacrificing usability
- Advocate for human agency in AI product design: interfaces that empower users to understand, question, and override AI recommendations rather than defer to them by default

7% airfare buy-up revenue | 10% ancillary revenue growth | 50% less time to detect and diagnose alarms

Lead Product Designer / Appfire / Nov 2022 - Apr 2024

Led product design (team of 4) for Jira automation and integration tools, splitting time between hands-on design (75%) and team leadership (25%).

- Designed a Jira workflow automation tool adopted by HubSpot, LinkedIn, and Roblox, among other major Jira integration users
- Led a team of 4 designers: workshops, work review, and design direction across the Jira integration product line
- Built shared templates and best practices, embedding user-centric decision-making into the team's research and design process

30% onboarding increase for automation

Senior Product Designer / TrackTik (now Trackforce) / Jun 2021 - Nov 2022

Designed security operations software for managing officers, sites, incidents, and compliance, and designed and maintained its design system.

- Designed a calendar view purpose-built for security operations — site tasks and dispatch — prioritizing visibility and fast response in critical situations
- Tool is used by top security companies globally, including Securitas

UI/UX Designer / Avanquest / Dec 2011 - Jun 2021

Split focus between marketing-facing design (landing pages, A/B testing) and platform adaptations of Soda PDF, a full-featured PDF editor — including Chromebook, Opera, and standalone online tool versions.

Earlier career: Web Designer → Senior Art Director across agencies in Europe / Sep 2000 - Dec 2011
